

# Keep your generator O.A.D.\* so you don't become D.O.A.\*

**\*Outside, Away & Dry**    **\*Dead On Arrival**

**Generators quickly produce high Carbon Monoxide (CO) levels that may cause death. You can't see or smell CO.**

- NEVER use a generator indoors or in partially enclosed spaces like garages.
- OPENING doors and windows or using fans WILL NOT prevent CO poisoning.
- LOCATE generators outdoors, away from doors, windows, vents that attach to the side of your house, and air conditioning units that could pull the CO indoors.
- USE battery-operated CO alarms in your home that have met the latest safety standards.
- FOLLOW the manufacturer's instructions for generators and CO alarms.
- TEST CO alarms frequently.
- GET fresh air IMMEDIATELY if you feel sick, dizzy or weak.
- For 24-hour advice call the Florida Poison Information Center at 1-800-222-1222. For emergency medical assistance call 911.
