## RABIES ALERT ISSUED FOR SEMINOLE COUNTY

**Contact:**

Mirna Chamorro  
[\(407\) 717-0184](tel:(407)717-0184)

**Sanford, Fla.** — The Florida Department of Health in Seminole County (DOH-Seminole) is issuing a rabies alert for neighborhoods surrounding the Casselberry Golf Club Course. The alert is in response to a cat which tested positive for rabies in that area. Residents in the area bordered to the north by Holly Hills Drive to the south by Jasmine Road, to the west by Salina Drive and to the east by Quintuplet Drive should avoid contact with cats and other wildlife. If you, a family member or someone you know thinks that they were bitten or scratched by a cat, contact Seminole County Animal Services at (407) 665-5201 or the Florida Department of Health in Seminole County at (407) 665-3243.

Residents and visitors in Seminole County should be aware that rabies is present in the wild animal population, and domestic animals are at risk if not vaccinated. Alerts are designed to increase awareness to the public. Please be aware that rabies activities can also occur outside the alert area. This rabies alert is for 60 days.

An animal with rabies could infect other wild animals or domestic animals that have not been vaccinated against rabies. All domestic animals should be vaccinated against rabies. Contact to feral cats, stray dogs and all wildlife particularly raccoons, bats, foxes, skunks, otters, bobcats and coyotes should be avoided.

The following advice is issued:

- All pets should have current rabies immunizations.
- Secure outside garbage in covered containers to avoid attracting wild animals.
- Do not leave pet food outside. This also attracts other animals.
- Avoid contact with all wildlife, especially feral cats, raccoons, bats, and foxes.
- If bitten or scratched by a suspected rabid animal, wash the wound immediately with soap and water, seek medical attention, and promptly report the incident to Seminole County Animal Services.
- Rabies is preventable when treatment is provided in a timely manner.

For general questions pertaining to animals, contact Seminole County Animal Services. For information related to non-domestic animals, contact the Florida Fish and Wildlife Conservation Commission (FWC) Northeast Region Office at (352) 732-1225.

Rabies is a disease of the nervous system that can cause paralysis and is fatal to warm blooded animals and humans. The virus is spread through saliva, and humans may become infected through a bite wound, scratch or exposure of a fresh cut or mucous membranes (eyes, nose or

mouth) to saliva of a rabid animal. The only treatment for human exposure to rabies is rabies specific immune globulin and rabies immunization. Appropriate treatment started soon after the exposure will protect an exposed person from the disease.
