2013 Call Volume Report

Florida EMSTARS Database Report

Date Range: January 1, 2013- December 31, 2013

Purpose

To provide the Florida Emergency Medical Services (EMS) information regarding the total incidents, total patient contacts, and total transports for 2013.

Definitions

Organizational Type is defined as the organizational structure from which EMS services are delivered (fire, hospital, county, etc.). The organizational types used within this report are derived from the National Emergency Medical Services Information System (NEMSIS).

Total Incidents is defined as the total number of EMS events that were submitted by each licensed EMS provider.

Total Patient Contacts is defined as the total numbers of patients that are responded to by each licensed EMS provider.

Total Transports is defined as the total number of times that an EMS unit responded to an EMS event that resulted in a patient being transported to destination.

Data Sources

The data in this report were derived from the Emergency Medical Services Tracking and Reporting System (EMSTARS), the Pre-hospital Aggregate System, and the Customer Oriented Medical Practitioner Administration System (COMPAS) licensure database. All three databases are maintained by the Florida Department of Health.

General Information

The term "call volume" can be used in many different ways throughout the state and country. For the purposes of this report, it was determined to separate the term "call volume" into three separate categories. The terms Incident Volume, Patient Contact Volume, and Transport Volume were elected to be used with this report. The terms total incidents and total patient contacts are not synonymous. The term total incidents indicate the total number of distinct incidents that are reported by EMS providers; a single adverse event (such as a multi-vehicle collision) can be reported as multiple incidents, by a single EMS agency that dispatches more than one responding vehicle or by multiple agencies responding to the same event. Total patient contacts indicate the total number of patients that are responded to by each licensed EMS provider.

For each service that submitted data to EMSTARS for all of 2013, Total Incidents are all unique combinations of Unit Notified by Dispatch Date/Time, EMS Unit Call Sign, and Incident Number. Within this set of incidents, patient encounters are all incidents in which the Incident/Patient Disposition is not "Cancelled," "No Patient Found," or "Cancelled on Scene – No Patient Contact." Transports are all incidents for which the Incident/Patient Disposition is "Treated, Transported by EMS." For each service that submitted data to the pre-hospital aggregate database for 2013, these counts are self-reported.

The total incident count in 2013 was 3,472,267, which includes 2,714 incidents reported by eight EMS agencies headquartered outside of Florida but operating within the state.

Although EMSTARS accepts self-reported call volumes from each agency that submits information to EMSTARS, the bureau calculated call volumes for each agency directly from the records submitted to EMSTARS for 2013 (as described on page 3); this is the same methodology used to produce the 2011 and 2012 report.

There were 271 EMS agencies found in COMPAS and reporting to the pre-hospital Aggregate database or EMSTARS at some point during 2013; this includes in-state and out-of-state agencies. This number includes agencies that were licensed at the start of the year by discontinued business, agencies that changed ownership (which requires a change in licensure number), and agencies that were licensed for the first time in 2013.

Organizational Type by EMS Transport Type

The following table describes organizational types for the 271 licensed EMS providers in 2013 (This number includes providers that ceased business or were licensed for the first time during the year. Change in ownership results in a change in license number; each license number is counted separately.), including eight providers licensed out-of-state. Fire-based EMS providers make up over half of the EMS providers in Florida, with private non-hospital EMS providers being the second most numerous organizational type. Thirty-seven percent (37%) of private non-hospital providers are air providers. Fire-based EMS providers make up the majority (95%) of all the Advanced Life Support Non-Transport (ALS/N) type of EMS in the state.

EMS Type by Region

The following table describes EMS licensure types by the seven Regional Domestic Security Task Force Regions (RDSTF's). It excludes eight providers based out-of-state (seven air transport providers and 1 ALS/T). Nearly two-thirds of the providers are ALS/T providers, with ALS Non-Transport making up the majority of the remainder.

Organizational Type by Region

The following tables describe EMS organizational types by Florida RDSTF's. This table also excludes the 8 out of state providers (all of which are Private, Non-Hospital). The first table describes the number of agencies with each organizational type for each region. The second table describes what percentage of each region is made up by each organizational type.

Call Volume - Total Incidents by Organizational Type

The following table/chart describes call volumes for total incidents by organizational type for 271 EMS agencies, **including** the eight out-of-state EMS providers.

When call volume is described by incident, patient encounter, or transport; the percentage of service provided by each organizational type is consistent, except for transport. When transports are described, call volume for fire-based EMS agencies falls by about ten percent, with the ten percent moving to private, non-hospital EMS agencies.
