

THE FLORIDA PRENATAL SCREEN

Florida Department of Health

The Florida Prenatal Screen identifies pregnant women who may benefit from home visiting services to improve pregnancy and birth outcomes for moms and babies. To reduce the wait time for moms between assessment and receipt of critical support services, a new digital version of the screen is available to provider facilities. Beginning July 2024, providers can use the power of this digital version of the screen, reducing facility staff stress due to traditional manual form input and help moms have a healthier pregnancy and birth.

STEPS TO ACCESS AND DISTRIBUTE THE DIGITAL SCREEN

1

Facility Account Registration

Complete the account registration for your facility:
FloridaHealth.gov/PrenatalScreenApp/Register

2

Facility Portal Access

After registering, a facility may add additional users and providers. All staff members will receive a subsequent email when their account is ready for use.

3

Send Patient Screening Form

Upon scheduling the initial prenatal appointment, staff should register the mom on the portal and inform her of the forthcoming email or text to complete the screen before her initial appointment.

The prenatal screen may be sent to the mom via email or text for completion before her appointment.

Mom completes the screen.

4

Confirmation of Completion and Consent

Confirm completion and consent of the screen before the initial prenatal appointment. If not completed, resend screen via email or text or utilize the kiosk mode on the portal.

5

Provider Discussion with Patient

During the initial prenatal appointment, the health care provider will review the prenatal screen responses and score. Providers should discuss potential benefits for mom and baby if referred to home visiting services.
