

## AGENDA

The meeting will start at 1 p.m. EDT, or soon thereafter, and will end no later than 2:30 p.m. EDT.

**1. Welcome and Opening Comments**

Joseph A. Ladapo, MD, PhD, State Surgeon General, Florida Department of Health

**2. Brief Introductions and Meeting Overview**

Members of the Council

**3. Approval of Minutes from the March 21, 2024, Meeting**

**4. Discussion Topics**

**a. Overview of the Council's Roles and Responsibilities**

Jon Conley, Council Coordinator, Florida Department of Health

**b. Physician Workforce Annual Report, 2024**

Jon Conley, Council Coordinator, Florida Department of Health

**c. Panel Discussion on Graduate Medical Education (GME)**

Chris Cogle, MD, Chief Medical Officer for Florida Medicaid, Agency for Health Care Administration

Dr. Dr. Joan St. Onge, MD, MPH, Senior Associate Dean for Faculty Affairs and Professional Development, University of Miami Miller School of Medicine

Dr. Dr. Yvonne Diaz, MD, Associate Dean Graduate Medical Education, University of Miami Miller School of Medicine

Dr. Elisa Zenni, MD, Senior Associate Dean for Graduate Medical Education, University of Florida College of Medicine - Jacksonville

**d. Next Steps**

Jon Conley, Council Coordinator, Florida Department of Health

**5. Public Comment**

**6. Closing Remarks**

**7. Adjournment**

**Mission:**

To protect, promote & improve the health of all people in Florida through integrated state, county & community efforts.

**Ron DeSantis**  
Governor

**Joseph A. Ladapo, MD, PhD**  
State Surgeon General

**Vision:** To be the **Healthiest State** in the Nation

## Physician Workforce Advisory Council

Meeting Minutes

March 21, 2024

11 a.m.- 1 p.m.

### Opening Remarks and Meeting Overview

**The following Council members were in attendance:**

Ulyee Choe, DO (Chair), Director, Florida Department of Health in Pinellas County

Debra Andree, MD, President and CEO, Community Health Centers, Inc.

Cuc Mai, MD, Associate Dean, College of Medicine, Internal Medicine, USF Health

Steven Bennett, MA, Director, Workforce Programs, Florida Association of Community Health Centers, Inc.

Nathan Falk, MD, Winter Haven Family Health Center

Joedrecka Brown Speights, MD, Professor and Chair, Department of Family Medicine and Rural Health, Florida State University College of Medicine

Linda Delo, DO

Michael Patete, MD

Danielle Drummond, MS, FACHE, President and CEO, Lakeland Regional Health

Roger Strickland, Director, University Budgets for Emily Sikes

Mark Sandhouse, DO, Executive Associate Dean/Director, Kiran C. Patel College of Osteopathic Medicine, Nova Southeastern University

**Additional attendees:**

Jon Conley, Florida Department of Health

Jeffrey Johnson, Florida Department of Health

Roger Andrews, Florida Department of Health

Sheri Creel, Florida Department of Health

Hanna Vanderheyden, Florida Department of Health

Gwen Freeman, University of Florida

Bobby Jernigan, Agency for Health Care Administration

Logan Lincoln, Advent Health

Jason Junker, Advent Health

Tiffany Robinson, Advent Health

The meeting was called to order by Dr. Ulyee Choe, Director of the Florida Department of Health in Pinellas County, County Health Systems Statewide Medical Director, and Vice Chair of the Physician Workforce Advisory Council (Council).

Dr. Choe welcomed the Council and reviewed the agenda for the meeting.

Jon Conley, Council Coordinator, proceeded to take roll call and recognized a quorum was present.

Next, the Chair asked for members to approve the minutes from both the May 25, 2023, and the October 25, 2023, meetings, which were then approved.

**Accredited Health Department**  
Public Health Accreditation Board

## **1. Florida Sunshine Law Overview**

Roger Andrews, a Senior Florida Department of Health Attorney, provided an overview of the Florida Sunshine Laws and how these laws apply to the Council as it conducts its business.

Mr. Andrews reminded the Council that any business related to the Council where two or more members are present requires notification to the public, and members should refrain from discussing Council topics or business together outside of the publicly noticed meetings.

Dr. Brown Speights asked for clarification on personal notes taken during a Council meeting, or during any work related to the Council, and whether these notes would be subject to public records. Mr. Andrews indicated that they would not be subject to a public record request as long as they remained private and were not shared.

Dr. Andree offered a clarification on triggers to the Sunshine laws, stating it usually occurs when two or more members of a body are together, and as such, it's best to only talk in generalities and refer to the minutes of the meeting or staff for more details. Mr. Andrews concurred with that example.

Dr. Choe thanked Mr. Andrews for his presentation and then moved the Council to the next agenda item.

## **2. Florida Community Health Assessment Resource Tool Set (FLCHARTS)**

Dr. Choe introduced Sheri Creel, the Public Health Reporting Section Administrator at the Florida Department of Health.

Mrs. Creel introduced Hanna Vanderheyden, manager for FLCHARTS, and they proceeded to provide the Council with an overview of the resources available through the FLHealthCHARTS.gov web portal.

Mrs. Creel indicated that FLCHARTS was established in 2005 to help counties and county health departments access state-level and comparative data from across the state. Since its original creation, FLCHARTS has expanded and developed a broader audience to include students, researchers, and policy makers.

Ms. Vanderheyden introduced the Council to some of the navigation tools and provided a high-level overview of some of the features and uses for FLCHARTS data.

Mrs. Creel provided the Council with an overview of the current data available specific to physician workforce under the Health Indicator pages and provided an overview of the Health Resources Availability section of the portal. She highlighted the various physician specialty areas for which FLCHARTS has available data and indicated they are constantly updating and adding information, including specialty areas.

Mrs. Creel proceeded to highlight results from several surveys housed on FLCHARTS, including the Florida Behavioral Risk Factor Survey data, and the Florida Youth Survey. These examples show how FLCHARTS can be used to share data captured through a survey format.

Dr. Delo asked a question specific to an example which Ms. Vanderheyden shared related to mammograms, and flu shots. She asked about the source of these data given that there is such a diverse network of options for individuals to receive such services, and how the Florida Department of Health was able to capture these data. Ms. Vanderheyden indicated these data were captured through survey data which are a representation of the overall population based on a sample of that population who participated in the telephone surveys and online questionnaires.

Dr. Brown Speights commented that she appreciated the work staff has done and appreciated how it has evolved over the last few years and thanked the staff for their work on the portal. Dr. Choe added that FLCHARTS is often recognized as a model tool set that many other states point to and wish they could develop.

### **3. Roles and Responsibilities**

The Council discussed the roles and responsibilities of the Florida Department of Health and the Physician Workforce Advisory Council. Dr. Choe emphasized the importance of clarifying these roles to enhance efforts in addressing Florida's physician workforce needs.

Jon Conley, Council Coordinator, outlined the Florida Department of Health's role as the coordinating and strategic planning body responsible for monitoring, evaluating, and reporting on the state's physician workforce. He highlighted tasks such as developing a model to assess workforce adequacy, aligning medical school capacity with workforce needs, and facilitating strategic planning with the Council.

Mr. Conley described the relationship between the Council and Florida Department of Health as a partnership, with the Council reviewing annual physician survey data and assisting in the development of a strategic plan. He proposed streamlining the annual report and improving public access to survey data, suggesting tools like FLCHARTS to aid the process.

During the discussion, Dr. Sandhouse expressed concern over the lack of relevant specialty options in the physician survey, which he felt could impact data accuracy. Mr. Conley acknowledged the feedback and noted the Council's role in making survey-related recommendations.

Dr. Choe transitioned the meeting to the next agenda item.

### **4. Strategic Planning Update**

Dr. Debra Andree, who serves as Chair of the Council's Strategic Planning Subcommittee, stated that the Subcommittee had adopted a strategic plan outline which included a vision and mission and laid out four goals for the Council's strategic plan.

She stated the four goals include: (1) increasing the supply of physicians, (2) improving the distribution and availability of physicians across the state, (3) improving physician workforce data and planning, and (4) fostering greater collaboration and stakeholder engagement.

Dr. Andree concluded that the next steps for the Council would be having staff develop a draft strategic planning document that fleshes out the four goals and starts to identify objectives and core components of the plan.

### **5. Physician Workforce Advisory Council 2024 Meeting Schedule Discussion**

Mr. Conley highlighted that in previous years, including this year, the Council had been meeting the required minimum number of two meetings per year. These meetings typically occur in the spring to review the previous year's annual report and again in the fall to review the annual survey results and develop recommendations.

Mr. Conley proceeded to discuss a scenario in which the Council might consider meeting quarterly for the remainder of 2024. The members agreed that identifying a recurring date, such as the second Wednesday of every third month, would be a good approach moving forward.

Additionally, some members expressed a desire to hold an in-person meeting at a statewide conference or in conjunction with an event that might attract many of the members. Dr. Patete noted the Florida Medical Association often includes meetings at their annual conference for the Medical School Deans. He suggested this event could serve as an opportunity to hold an in-person Council meeting.

## **6. Public Comment**

No public comment

## **7. Closing remarks**

Dr. Choe summarized many of the discussions during the meeting and indicated the members had highlighted some issues that may impact the physician workforce. He also emphasized the importance of the Council's work and mentioned staff would be reaching out in the coming weeks to help establish a more consistent meeting schedule for 2024.

Dr. Choe asked for a motion to adjourn the meeting at 12:44 p.m., which was made by Dr. Delo and seconded by Dr. Andree.

**The meeting was adjourned at 12:44 p.m.**

**Mission:**

To protect, promote & improve the health of all people in Florida through integrated state, county & community efforts.

## Executive Summary

---

The Physician Workforce Survey is part of the licensure renewal process for physicians and is administered by the Florida Department of Health (Department), Division of Medical Quality Assurance. Data in this report are from survey responses for licensees who renewed from July 1, 2022, through June 30, 2024.

Of the 97,900 physicians who hold a license that allows them to actively work as physicians in Florida, 83,145 renewed their medical license between July 1, 2022, and June 30, 2024, and responded to the physician survey. This annual report focuses only on the 59,856 physicians who provide direct patient care that renewed their license and responded to the survey.<sup>1</sup>

### Key findings include:

- By age, physicians 40 to 49 years of age comprise the largest group participating in the physician survey. Of note, these data also show that almost one-third of respondents (32.8%) reported their age as 60 years or older.
- Alachua County has the highest rate, 62 physicians per 10,000 population while Florida's less populous counties have fewer than 10 physicians per 10,000.
- Florida's physicians providing direct patient care report internal medicine and family medicine as the two most common medical specialty areas, with over 40% of respondents identifying in these two groups.
- In terms of workload, 37,438 physicians (68%) report seeing up to 100 patients per week.
- A total of 1,521 obstetricians and gynecologists (OB/GYNs) report they deliver babies; 742 physicians reported they plan to discontinue obstetric care within the next two years.
- A total of 736 radiologists responded that mammography was part of their practice; 1,611 radiologists reported a specialty in diagnostic radiology.
- More than 95% of physicians responding to the physician survey reported accepting new Medicare patients and almost 89% reported accepting new Medicaid patients.
- Most physicians providing on-call services (11,799) are not planning to decrease their services. However, nearly 36.5% or 6,750 of 18,545 physicians reported in the survey that they plan to reduce on-call services.
- Regarding changes in scope of practice;
  - 8,079 physicians report they plan to stop providing direct patient care within the next five years; most reported approaching retirement as the reason for the change.
  - 3,055 reported plans to leave the state, while separately, another 401 reported they will change their medical specialty.

<sup>1</sup> Section 458.3191 and Section 459.0081, Florida Statutes

## Introduction

Since 2007, the Florida Legislature has recognized that physician workforce planning is crucial for ensuring an adequate supply of trained physicians to meet the state's growing health care needs. This is especially important as Florida's population and elderly population increases.<sup>2</sup> Chapters 458 and 459, Florida Statutes, require the Florida Department of Health to analyze the results of the Florida Physician Workforce Survey (physician survey) and report findings to the Governor, the President of the Senate, and the Speaker of the House of Representatives by November 1 each year. The Florida Physician Workforce 2024 Annual Report fulfills these statutory requirements.<sup>3</sup>

### **Included herein is the analysis, by geographic area and specialty, of the number of physicians who:**

- ✓ Practice medicine in this state.
- ✓ Perform deliveries of children in the state.
- ✓ Read mammograms and perform breast-imaged-guided procedures in the state.
- ✓ Perform emergency care on an on-call basis for a hospital emergency department.
- ✓ Plan to reduce or increase emergency on-call hours in a hospital emergency department.
- ✓ Plan to relocate outside the state.
- ✓ Plan to reduce or modify the scope of their practice.<sup>4</sup>

### **About the Survey**

Data reported in the Florida Physician Workforce 2024 Annual Report are from responses to the physician survey administered from July 1, 2022, through June 30, 2024. The physician survey is part of the licensure renewal process for physicians and is administered by the Department's Division of Medical Quality Assurance. Physicians must renew their licenses every other year. However, newly licensed physicians are not included in the analysis because the physician survey is only administered upon licensure renewal.<sup>5</sup>

<sup>2</sup> Chapter 2007-172, Laws of Florida.

<sup>3</sup> Section 458.3191 and Section 459.0081, Florida Statutes.

<sup>4</sup> Section 458.3192, Florida Statutes.

<sup>5</sup> In charts and graphs, "n" equals the number of question responses. The number of responses will equal the number of respondents for that survey question, except where multiple responses to a question are permitted. Unspecified values include those physicians not responding to a survey question.

# Section 1: Physicians Providing Direct Patient Care and Demographic Characteristics

Key to interpreting the physician survey is an understanding of the physicians reflected in this report. As shown in Exhibit 1.1, a total of 97,900 physicians hold a license that allows them to actively work as a physician in Florida. Of these physicians, 83,145 renewed their medical license between July 1, 2022, and June 30, 2024, and responded to the physician survey. Of those surveyed, 59,856 provide direct patient care.<sup>6</sup> Except where otherwise noted, this report presents survey results and analyzes physicians who provide direct patient care (n=59,856).

## Demographics<sup>7</sup>

### By Gender

Physician demographic data are captured from licensure files rather than physician survey responses. As shown in Exhibit 1.2, male physicians comprise the largest group in Florida, almost 66% (n=39,306) while female physicians comprise 33% (n=19,777) of the total.

Source: Florida Physician Workforce Survey, 2022–24

<sup>6</sup> Direct patient care physicians are physicians holding a Florida medical license who completed the license renewal survey and reported providing direct patient care in the last twelve months and who were not classified as current medical residents, interns, or fellows.

<sup>7</sup> Unless otherwise noted, out-of-state physicians are included throughout this report in physician survey results.

## By Ethnicity

Exhibit 1.3 presents the racial and ethnic composition of the physician survey respondents. White physicians comprise the largest group of respondents followed by those identifying as Hispanic (17.9%) and Asian (13.56%). Black physicians comprise just under 6% in the current survey.

Source: Florida Physician Workforce Survey, 2022–24

## By Age Range

By age, physicians 40 to 49 years of age comprise the largest group in the physician survey. Of note, these data show that almost one-third of respondents (32.8%) reported their age as 60 years or older. The physicians 60 years or older will be more likely to begin considering retirement in the coming years which could impact access to care for Floridians.

**Exhibit 1.4**  
Practicing Physicians by Age Range

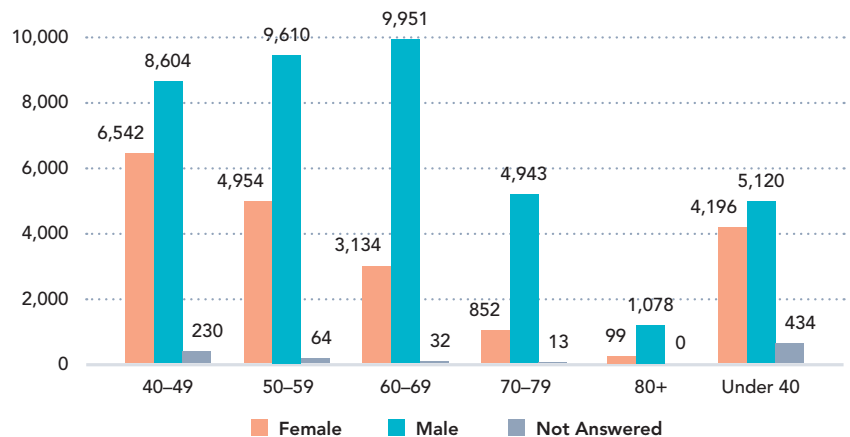

Source: Florida Physician Workforce Survey, 2022–24

## By Gender and Age

Exhibit 1.5 shows physicians by gender and age group. The 40–49 age group included the greatest number of physicians. Further, the number of female physicians compared to male counterparts is closest in the under 40 age group, where male physicians number 5,120 (55%) compared to 4,196 (45%) female physicians.

**Exhibit 1.5**  
Physicians by Gender and Age Group

Source: Florida Physician Workforce Survey, 2022–24

## Physician Specialties

Physician specialty refers to a medical field that physicians can specialize in, focusing their practice in one specific area. Physician specialties may focus on one type of disease, one organ in the body, one organ system, or a specific patient population, typically because they share similar medical symptoms and require similar types of care.<sup>9</sup> In Florida, specialties are defined in the context of board-certified specialists (see Glossary).

**Exhibit 2.3**  
**Florida Physicians by Specialty<sup>1</sup>**

Source: Florida Physician Workforce Survey, 2022–24

<sup>1</sup> For the geographic distribution of physicians by specialty, see Appendix A.

In terms of specialties, Florida’s physicians report internal medicine and family medicine as the two most common specialty areas, with over 40% of respondents identifying in these two groups, see Exhibit 2.3. The next most reported physician specialty areas are surgery, emergency medicine, and pediatrics, at 8% each.

● Internal Medicine    ● Family Medicine    ● Surgery, Emergency Medicine, and Pediatrics

*The complete statewide geographic distribution of direct patient care providers is found in Appendix A. As expected, specialists of all types are found in densely populated Florida counties and/or those counties that are home to the state’s university and other large medical centers, e.g., Alachua, Brevard, Broward, Duval, Miami-Dade, and Orange.*

<sup>9</sup> See Definitive Healthcare.

## Section 3: Primary Care, Practice Settings, and Workload

Primary care provides the majority of health care needs over a person’s life, and it is people rather than disease-focused.<sup>10</sup> When analyzing health care workforce, the Health Resources and Services Administration (HRSA) defines primary care physicians to include internal medicine, family medicine, pediatrics and geriatrics.<sup>11</sup> However, HRSA uses a slightly different definition of primary care to designate Health Professional Shortage Areas (HPSA) that identify areas of unmet needs. A HPSA designation identifies an area, population, or facility experiencing a shortage of health care services. In this context, primary care includes internal medicine, family medicine, pediatrics, and obstetrics and gynecology.<sup>12</sup> As of 2024, 66 of 67 Florida counties have primary care shortages in all or some part of the county.<sup>13</sup>

### Primary Care

For the purposes of this report, primary care comprises three physician specialties, general internal medicine, family medicine, and general pediatrics. Exhibit 3.1 shows the total number of survey respondents who reported a specialty in one of these three and, of those physicians, the number providing primary care.

**Exhibit 3.1**  
**Primary Care Specialties Reported by Physician Survey Responses**

Specialty	Count (All)	Count (Primary Care)
Internal Medicine	16,583	8,361
Family Medicine	8,686	7,253
Pediatrics	4,611	3,110
<b>Total</b>	<b>59,051</b>	<b>8,724</b>

Source: Florida Physician Workforce Survey, 2022–24

Exhibit 3.2 on the right shows that within the group of primary care physicians, those in internal medicine comprise the largest group, 45%. Family medicine physicians comprise nearly 39% of primary care physicians and pediatricians are 16% of the total. Exhibit 3.3 provides the distribution of primary care specialists by county.

**Exhibit 3.2**  
**Proportion of Primary Care Physicians**

<sup>10</sup> World Health Organization, Primary Care Fact Sheet.

<sup>11</sup> HRSA, State of Primary Care Workforce, 2023.

<sup>12</sup> SHRSA. Shortage Designation Management System (SDMS): Manual for Policies and Procedures, May 24, 2024.

<sup>13</sup> According to the Rural Health Information Hub, Monroe County is the only Florida county that shows no primary care shortage in the state.

### Exhibit 3.3 Number of Primary Care Physicians, by County

### Practice Settings

Exhibit 3.4 shows the types of practice settings where physicians reported working. Most (63.5%) practice in an office setting, either a solo practice, single or multi-specialty practice. The next largest group practices in a hospital (20.6%) with the rest distributed across various practice settings, e.g., medical schools, health care organizations, and surgery centers.

### Exhibit 3.4 Physician Survey Respondents Who Identified Their Type of Practice Setting

## Workload

Physicians who provide direct patient care are asked to identify the average number of patients they see per week. As shown in Exhibit 3.5., the largest group (37,438 physicians or 68%) report seeing from 1 to 99 patients per week.

**Exhibit 3.5**  
**Average Number of Patients Per Week**

Source: Florida Physician Workforce Survey, 2022-24

In addition to gathering data on number of patients seen by physicians, the physician survey also asks physicians about how they spend their hours during the week. As shown in Exhibit 3.6, 43.97% of respondents reported spending 21 to 40 hours weekly with patients.

**Exhibit 3.6**  
**Weekly Patient Care Hours**

Source: Florida Physician Workforce Survey, 2022-24

In response to questions about other types of work, i.e., research and teaching or administrative work, they reported 1 to 20 hours weekly of administrative work (77.87%). Regarding research and teaching, physicians reported 1 to 20 hours (46.5%) weekly for research and teaching hours or zero hours of research and teaching (36.8%).

## Section 4: Obstetrics and Gynecology (OB/GYN) and Radiologic Specialties

As noted in Florida’s State Health Improvement Plan, the well-being of women, infants, children, and families determines the health of the next generation. Fundamental to the health of the next generation are the physicians who will deliver babies.<sup>14</sup> Also key to women’s health is access to mammography screenings and the radiologists who can make diagnoses and provide additional care based on these test results.

### Florida Births

From 2017 through 2023, Florida’s number of resident live births averaged 219,535 per year. The rate of resident live births per 1,000 population declined overall from a high of 10.9 in 2017 to 9.8 in 2023. (See Exhibit 4.1). Given the distribution of Florida’s population in 2023, the number of resident births per county varied widely from nearly 30,000 in Miami-Dade to fewer than 100 in the less populous counties of Franklin, Glades, Lafayette, and Liberty.<sup>15</sup>

**Exhibit 4.1**  
**Resident Live Births in Florida, 2017 to 2023**

	2017	2018	2019	2020	2021	2022	2023 <sup>1</sup>
--	------	------	------	------	------	------	-------------------

Rate per 1,000 total population	10.9	10.6	10.3	9.7	9.8	10.0	9.8
---------------------------------	------	------	------	-----	-----	------	-----

<sup>1</sup> 2023 data are provisional and subject to change.  
Source: Florida Department of Health, Bureau of Vital Statistics

<sup>14</sup> Florida State Health Improvement Plan, 2022–2026, Priority Area 4, Maternal and Child Health.

<sup>15</sup> See 2023 Provisional Birth Count Data at [www.FLHealthCHARTS.gov](http://www.FLHealthCHARTS.gov)

As noted previously, physicians may choose any number of specialties, for example OB/GYN or radiology. It is possible for these physicians to further specialize within a subspecialty that may require additional training. Exhibit 4.2 presents the OB/GYN subspecialties and those physicians who answered yes that they deliver babies.

**Exhibit 4.2  
Physicians Reporting That They Deliver Babies**

Subspecialty	Do not deliver babies	Deliver babies
Obstetrics and Gynecology, General	718	1,396
Critical Care Medicine - Obstetrics and Gynecology	3	-
Gynecologic Oncology - Obstetrics and Gynecology	86	6
Hospice and Palliative Medicine - Obstetrics and Gynecology	5	-
Laborist - Obstetrics and Gynecology	2	75
Maternal and Fetal Medicine - Obstetrics and Gynecology	95	-
Reproductive Endocrinology - Obstetrics and Gynecology	73	41
Urogynecology - Obstetrics and Gynecology	76	-
<b>Total</b>	<b>1,058</b>	<b>1,521</b>

Source: Florida Physician Workforce Survey, 2022-24

Out of **2,579** total responses, more subspecialty physicians reported delivering babies.

The physician survey also asks physicians if they are planning to discontinue obstetric care for any reason in the next two years. A total of 742 physicians (out of 2,658) answered yes to this question. Their reasons for discontinuing obstetric care are provided in Exhibit 4.3. Nearly 23.5% said the reason was retirement. But across the responses, physicians also answered reimbursement rates, cost of professional insurance, and liability and litigation.

**Exhibit 4.3  
Reasons for Discontinuing Obstetric Care in the Next Two Years**

Exhibit 4.5 shows the statewide distribution of radiologists. For the 2022–24 physician survey, there are 20 counties that have no radiologists (See Exhibit 4.5).

### Exhibit 4.5 Number of Physicians Identifying a Primary Specialty in Any Radiology Subspecialty by County

The physician survey also asks radiologists if they see mammography patients. For those who answer yes, they are asked a more detailed question as to the types of mammography services they provide (See Exhibit 4.6).

### Exhibit 4.6 Radiologists Where Mammography Was Part of Their Practice (n=736)

## Section 5: Medicare and Medicaid

Another factor that affects access to health care is the willingness of providers to accept certain insurance and health coverage plans. As of June 2024, 5,101,450 individuals in Florida were served by Medicare, equating to roughly 2.8 million in fee-for-service and 2.2 million in Medicare Advantage plans.<sup>16</sup> As of November 2024, Florida also had 4,431,970 individuals enrolled in Medicaid.<sup>17</sup>

### New Medicare and Medicaid Patients

Florida's Medicare and Medicaid enrollment numbers emphasize the demand for physicians who accept these health coverage plans. According to the most recent physician survey, more than 95% of physicians reported accepting new Medicare patients and almost 89% reported accepting new Medicaid patients (See Exhibits 5.1 and 5.2).

**Exhibit 5.1**  
**Physicians Reporting That They Accept New Patients With Medicare**

**Exhibit 5.2**  
**Physicians Reporting That They Accept New Patients With Medicaid**

<sup>16</sup> Medicare Enrollment Dashboard | CMS Data.

<sup>17</sup> Florida Agency for Health Care Administration.

The physician survey asks those physicians who are not accepting new Medicare or Medicaid patients to describe the reason for their decision. Of those responding to why they are not accepting new Medicare patients, nearly 40% said their practice was at full capacity (see Exhibit 5.3). Of those responding to why they are not accepting new Medicaid patients, 23% of respondents reported their practices being at full capacity (See Exhibit 5.4). Aside from practices that were at full capacity, physicians also noted other reasons for not accepting new Medicare or Medicaid patients, such as paperwork and billing requirements and low compensation.

**Exhibit 5.3**  
Reasons Why Physicians Are Not Accepting New Medicare Patients

- 788/40.58% Other
- 755/38.88% Practice at Full Capacity
- 217/11.17% Low Compensation
- 100/5.15% Too Much Paperwork
- 73/3.76% Billing Requirements
- 9/0.46% Concerned About Fraud Issues

## Section 6: On-call Providers

According to the American College of Emergency Physicians (ACEP), emergency physicians are available 24 hours a day, seven days a week. Other specialists, such as neurosurgeons and cardiologists, work as needed and are on-call.<sup>18</sup> In the current survey, 20,270 physicians reported providing on-call services. Data for on-call services is reported by physicians who responded that hospital best describes their main medical practice. Exhibit 6.1 shows the number of on-call providers by county.

**Exhibit 6.1**  
**Number of Physicians Providing On-call Services by County**

Source: Florida Physician Workforce Survey, 2022–24

**Exhibit 6.2**  
**Number of On-call Providers by Specialty**

By far the greatest number of on-call physicians (2,206) list their specialty as **internal medicine** (33.1%) compared to the second highest number of specialists (850) who list a **surgery** specialty (12.8%).

\*Other specialties include: Dermatology-51, Emergency Medicine-171, Medical Genetics-6, Neurology-190, Nuclear Medicine-2, Ophthalmology-128, Orthopedic Medicine-163, Otolaryngology-138, Pathology-56, Physical Medicine and Rehab-55, Preventive Medicine-7, Proctology-2, Psychiatry-206, Urology-106

Source: Florida Physician Workforce Survey, 2022–24

<sup>18</sup> American College of Emergency Physicians. Shortage of Physician Specialists. Last visited August 23, 2024.

Exhibit 6.3 shows the distribution by county for those physicians planning to reduce on-call services. Most physicians providing on-call services are not planning to decrease their services (11,799). See Exhibit 6.4. However, nearly 6,750 physicians reported that they plan to reduce on-call services.

### Exhibit 6.3 Number of Providers Planning to Decrease On-call Services

Source: Florida Physician Workforce Survey, 2022–24

The physician survey asks physicians who are planning to decrease on-call services to describe the reasons for their decisions. The most common answer was due to **lifestyle considerations** (25%).

### Exhibit 6.4 Reasons Physicians Reported for Decreasing On-call Services

Source: Florida Physician Workforce Survey, 2022–24

## Section 7: Change in Physician Practices

The dynamics of the physician workforce are continually changing. New physicians enter the workforce and those in practice make changes to their scope of practice. Scope of practice, as referenced in the physician survey, refers to physicians planning to retire, relocate to work in another state, or change their primary practice specialty.

### Scope of Practice

As shown in Exhibit 7.1, more than 8,100 physicians anticipate discontinuing direct patient care in the next five years. More than 432 physicians anticipate a change in their medical specialty.

#### Exhibit 7.1 Physicians Changing Their Scope of Practice

Physicians anticipating changes in scope of practice	
Physicians who plan to stop providing direct patient care in Florida sometime within the next five years.	<b>8,136</b>
Physicians who plan to change specialties in the next five years.	<b>432</b>
<b>Total</b>	<b>8,568</b>

Source: Florida Physician Workforce Survey, 2022–24

The table below presents the results for 8,444 physicians by specialty who are planning to change their scope of practice. Proportionally, the physicians planning to change their scope of practice mirror the overall pattern of physician specialties, for example, the largest numbers are among internal and family medicine physicians.

#### Exhibit 7.2 Physicians Changing Their Scope of Practice in the Next Five Years, by Specialty

<b>Internal Medicine - 2,156</b>	<b>Obstetrics and Gynecology - 486</b>	Otolaryngology - 137
<b>Family Medicine - 1,248</b>	<b>Radiology - 399</b>	Pathology - 122
<b>Pediatrics - 688</b>	<b>Psychiatry - 337</b>	Dermatology - 121
<b>Surgery - 669</b>	<b>Neurology - 199</b>	Physical Medicine and Rehab - 89
<b>Emergency Medicine - 646</b>	<b>Ophthalmology - 189</b>	Urology - 76
<b>Anesthesiology - 627</b>	<b>Orthopedic Medicine - 177</b>	Preventive Medicine - 63

Source: Florida Physician Workforce Survey, 2022–24

## Reducing Direct Patient Care

Of the 8,136 physicians who reported that they plan to stop providing direct patient care, 8,079 responded to a question regarding their reasons for this decision. As shown in Exhibit 7.3, nearly 70% report an approaching retirement date.

**Exhibit 7.3**  
**Reason for Stopping Providing Direct Patient Care**

## Relocating

Another component of practice changes encompasses physicians who plan to move their practices in the next five years. As shown in Exhibit 7.4, out of 3,055 physicians who responded, most appear to be making these changes for family (34%) or financial (compensation) reasons (19%).

**Exhibit 7.4**  
**Reason for Moving in the Next Five Years**

Another perspective on physicians deciding to relocate is seen in Exhibit 7.5. Of the 3,113 physicians who report planning to relocate outside the state, 3,076 identified their specialty. As shown in Exhibit 7.6, primary care physicians in internal medicine (25%) and family medicine (12%) comprise the largest groups considering relocation outside the state, followed by emergency medicine (12%).

**Exhibit 7.5  
Florida Physicians Who Anticipate Relocating Outside the State in the Next Five Years**

Source: Florida Physician Workforce Survey, 2022–24

Despite their investment in a current medical specialty, a small number of physicians reported they were planning to change specialties. The graph below summarizes the reasons that 410 physicians describe regarding this decision. Aside from those who answered Other, the most common reasons for changing a practice specialty were compensation (26.2%), family (17.7%) and liability exposure (11%).

**Exhibit 7.6  
Reason for Changing Specialty**

## Conclusion

Responses to the physician survey are a snapshot in time that provides insight regarding the composition of Florida's physician workforce and looming potential changes, such as retirements and other changes in scope of practice.

In terms of factors that may influence workforce, these data also show that almost one-third of respondents (32.8%) reported their age as 60 years or older. As many as 8,079 physicians report they plan to stop providing direct patient care within the next five years: most (69% or 5,555) reported approaching retirement as the reason for the change. Results also indicate that 742 physicians plan to discontinue obstetric care within the next two years. Nearly 6,750 (36.5%) of 18,545 physicians reported in the survey that they plan to reduce on-call services, while 3,055 reported plans to leave the state. On a positive note, more than 95% of physicians responding to the physician survey reported accepting new Medicare patients and almost 89% reported accepting new Medicaid patients.

The state of Florida continues working to strengthen the health care workforce. In recent years, the Legislature has funded the Florida Reimbursement Assistance for Medical Education and Florida Dental Student Loan Repayment programs to encourage qualified medical and dental professionals to practice in underserved locations of the state. These programs provide annual payments to offset the loans and educational expenses incurred by students for studies leading to medical and dental degrees and subsequent licensure.

### Survey Limitations

Two factors limit the ability to draw firm conclusions from the physician survey and to compare survey results over time. The physician survey is complicated by the licensure renewal cycle. Instead of an annual comprehensive survey of all physicians, the physician survey captures information over a four-year period to have all licensees included. In addition, it does not capture all licensed physicians and not all physicians who complete the physician survey will answer all the questions.

To more fully assess how many Florida physicians deliver babies, the physician survey could be revised to include that question for family medicine physicians who may deliver babies, especially in rural areas. There also might be an opportunity to obtain more comprehensive data as outlined in statute.

# Glossary

The following definitions explain certain terms used in this report.

Term	Definition
Licensed Physicians/Active License	Physicians who are authorized to practice based on license status as of June 30, 2022, including those who may or may not be actively providing direct patient care. Only physicians with a license status of clear, clear/active, conditional/active, emergency restrictions/active, obligations/active, and probation/active are included.
Physician Workforce Survey (physician survey)	The physician survey was completed by all medical doctors (allopathic and osteopathic) biennially during the Florida medical license renewal process.
Physicians Not Providing Direct Patient Care in Florida	Physicians holding a Florida medical license who took the survey and reported they provided no direct patient care in the last twelve months, physicians who reported they were medical residents, interns, or fellows, physicians with inactive licenses, physicians who did not answer enough survey questions to determine if they were practicing, physicians whose practice location is officially listed as “not practicing,” physicians whose practice location is officially listed as “confidential” unless the survey response gives a county location, and physicians whose license status as of June 30, 2023, does not authorize them to practice (administrative suspension, delinquent, emergency suspension, inactive, military active, retired, suspended, temporary military active and voluntary withdrawal).
Physicians Providing Direct Patient Care in Florida	Licensed physicians holding a Florida medical license who completed the survey and reported providing direct patient care in the last twelve months and who were not classified as current medical residents, interns, or fellows.
Primary Care Physicians	Physicians indicating they practice general internal medicine (0500-0501), family medicine (0400-0405 and 0407-0408) or general pediatrics (1400-1401) as a primary practice specialty, as defined by the American Academy of Family Physicians.
Primary Specialty	The primary practice specialty reported by the physician. Specialties, per section 458.3312, Florida Statutes, means a physician licensed under this Chapter may not hold himself or herself out as a board-certified specialist unless the physician has received formal recognition as a specialist from a specialty board of the American Board of Medical Specialties or other recognizing agency that has been approved by the board. However, a physician may indicate the services offered and may state that his or her practice is limited to one or more types of services when this accurately reflects the scope of practice of the physician.
